

Figure 1

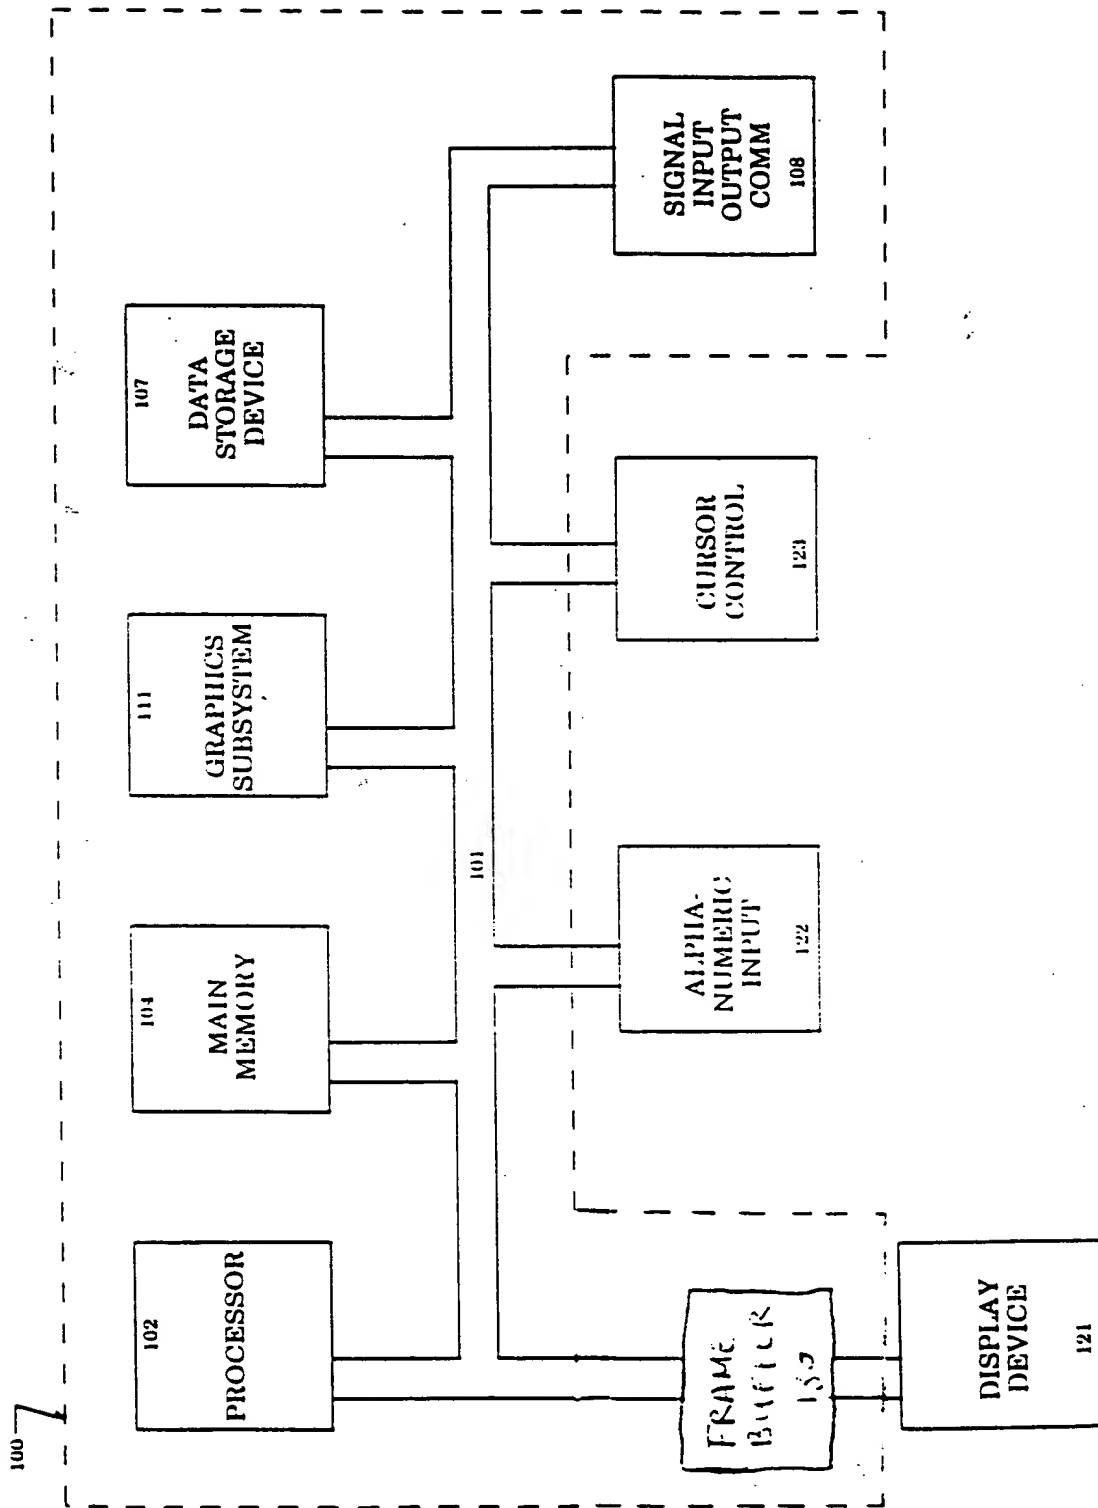

Figure 2

Figure 3

Value	Conditions **
$(-1)^s \times 2^{(e-16)} \times 1.m$	$00000 < e < 11111$
$(-1)^s \times 2^{15} \times 1.m$	$e == 11111, m \neq 1111111111$
$(-1)^s \times 2^{-16} \times 1.m$	$e == 00000, m \neq 0000000000$
zero	$e == 00000, s == 0, m == 0000000000$
NaN *	$e == 00000, s == 1, m == 0000000000$
positive infinity	$e == 11111, s == 0, m == 1111111111$
negative infinity	$e == 11111, s == 1, m == 1111111111$

\* NaN: "Not a number," which is generated as the result of an invalid operation and also represents the concept of "negative zero."

\*\* Extrapolation to s11e5 is readily achievable.
